

Template Instructions README

These AutoCAD templates (.dwt) are designed to be brought into “paper space” at 0, 0. They represent a “D” size sheet of paper.

The templates have, built into them, LANL’s CAD Standards requirements pertaining to text, line weight, line type and dimensioning styles.

Do not explode the templates – use the editable attribute command to add information to title block. Use the block editor to modify all other elements of the title block.

All elements drawn in model space are to be at full scale. All scaling is to be done in paper space using the viewport scaling feature.

All text and dimensioning is to be completed in paper space.

Layering embedded in the templates is for general use and should be added to based on the National CAD Standard.

The Frutiger CE 75 Black.ttf file is used by the template for the “ENGINEERING SERVICES” logo and therefore is only needed for LANL users. It should be installed by double clicking the icon and clicking the “INSTALL” button at the top of the page. This installation is only necessary one time.
